

Part IV : Environment

PROLOGUE

This is a fascinating segment dealing with outstanding papers on various environmental aspects. The people are engaged in irrational and unethical experiment on the patient earth. The question arises how long we are going to endlessly exploit nature and the natural resources. Stressingly, we are no longer in harmony with nature and our relation with earth has resulted into no deposit and no return to the society. In such situation feasible ecological code is the need of the time and man to give unqualified support to the environmentally-oriented economic measures and sustainable human development. The perception of legal scientists, environmentalists and ecologists need to be in conformity with the postulates of "egalitarian and environmental consumerism" and international environmental law in order to protect the health of the planet. Tragedies such as Bhopal, Chernobyl and Narmada Sagar Project (India) are wake reminders to the humanity and call for a rule of a law to protect the victims of environmental and economic disasters. In the International Conference hosted by the Indian Law Institute papers presenters addressed in the environment segment that environmentally sustainable economy and "environmental consumerism" are to be harmonized for ecological balance and all these vivid aspects are comprehensively perceivable in this rich part of the tome.
